

Cardiatis Presents at Medtech Insights' In3 Europe Investor Conference in Brussels

Cardiatis presented today at Medtech Insights' In3 Europe Investor Conference in Brussels. Margy Waugh led the presentation team and highlighted the \$1.5 billion Endovascular Aneurysm Repair market opportunity that the company 3D Multilayer Stent Technology addresses.

Mr. Nouredine Frid, Cardiatis CEO was present at the meeting and answered technology and patents related questions from interested investors and industry executives.

Brussels, Belgium – September 19, 2006 – Cardiatis SA team presented today at Medtech Insights' In3 Europe Investor Conference in Brussels. Margy Waugh, who is responsible for relation management and corporate communication, led the team presentation and highlighted the \$1.5 billion Endovascular Aneurysm Repair market opportunity that the company's 3D Multilayer Stent Technology Platform addresses.

"Our three-dimensional multilayer stent design slows and laminates blood flow within aneurysms allowing the formation of organized thrombus. This innovative approach shifts the paradigm of how aneurysms can be repaired and fulfills an unmet need in a \$1.5 billion market" she stated. "Our technology will make treatment of aneurysms, irrespective of their location, as simple as standard stenting procedures" she explained.

Mr. Nouredine Frid, Cardiatis CEO was present at the meeting and answered technology and patent related questions from interested investors and industry executives. He clarified the fact that Cardiatis is the only company currently developing three dimensional multilayer braided stents technology and emphasized the company's strong patent portfolio.

About Cardiatis

Cardiatis, an innovative medical technology company located in Belgium, is focused on developing its patented FluidSmart 3D multilayer stent technology platform, a next generation technology for endovascular aneurysm repair. Additional information can be found on Cardiatis web site at www.cardiatis.com.
